

<b>Strategy</b>	STAR™ III VEGA
<b>Account Type</b>	ERISA Qualified and non-qualified discretionary accounts.
<b>Investment Goals</b>	Growth from market appreciation and quarterly income from option premiums.
<b>Overview</b>	The strategy seeks consistent, repetitive returns while reducing risk across all market cycles.
<b>Investments</b>	An equally-weighted portfolio of global ETFs designed to mirror certain global indices. These may include Treasury Bonds, S&P 500, Russell 2000, Emerging U.S. and Foreign Markets, Gold and others. An overwrite options strategy is used to generate a steady non-correlated return stream with an average time until expiration of usually three months or less. Accumulated option premiums can be moved to money market or insured deposit account.
<b>Investment Philosophy</b>	Partnervest does not seek to forecast or time the market but positions its strategies to harness volatility and capture positive returns wherever and whenever they occur in the portfolio. This diversification can reduce volatility of the overall portfolio.
<b>Benefits</b>	Options can serve as a “portfolio repair strategy” in market declines and help generate income and control risk. Premiums accrue independently of the underlying investments. Systematic rebalancing can help maintain the original risk-reward characteristics. Portfolio is fully transparent.
<b>Investment Minimum</b>	\$100,000
<b>Reporting</b>	Monthly custodian statements Quarterly Partnervest performance reports
